COMMERCIAL SPACE & LIGHTING

Definition of Public High Space

In today's society, with the rapid development of economy and material culture, urban public space is experiencing unprecedented huge changes. The old simple, obsolete places of public social activities, has quietly revolutionized, and gradually evolved into a large-scale, multi-functional, multifarious forms of architectural complexes.

These architectural complexes, such as large-scale commercial shopping plazas, three-dimensional transportation hubs, and urban art and culture expositions, not only carry the splendor of material civilization, but also contain the deep heritage of spiritual civilization. With these unique spatial areas, a great enjoyment of both material and spiritual pleasures is provided to the public, making social and recreational activities both diverse and well-organized.

As a unique form of urban public space, such large-scale public buildings have become a bright landscape in urban space with their broad coverage and complex spatial structure. Gifted with the reputation of “high space architecture”, the buildings not only highlight the development and change of the city, but also become an important and indispensable part of people's lives.

Definition of Commercial Store

Today, commercial stores can be broadly divided into shopping centers, department stores, brand flagship stores, supermarkets, convenience stores and other forms of stores according to their size.

With the increasing sophistication and diversification of consumption patterns, branded chain commercial stores have won the favor and respect of the majority of customers by virtue of their multiple values, such as "selected products, unique experience, and excellent service".

These stores not only provide customers with a rich selection of goods, but also through the carefully crafted environment and services, allowing customers to enjoy physical and mental pleasure and satisfaction while shopping.

Public High Space and Lighting

Public high space due to the special spatial form and functional needs, its lighting design needs to be more detailed and multi-dimensional considerations.

Complexity of Space Functional Requirements

Different public high spaces serve different functional needs, such as reading, resting, socializing, and passage. Lighting design needs to be based on these functional needs to set different light intensity and color temperature, with a view to creating a comfortable, safe, in line with the needs of the activities of the light environment. In the reading area of the library, for example, a higher light intensity and soft color temperature are needed to reduce eye fatigue; while in the rest area, a lower light intensity and warm color temperature can be used to create a warm ambiance.

Consideration of Spatial Scale

As public high spaces usually have a large volume and height, the lighting design needs to take this feature into full consideration to ensure that the light can be evenly distributed, avoiding overly strong contrasts between light and dark or areas with insufficient light. The even distribution of light can be achieved by using high-efficiency lamps and reasonable layout, as well as by utilizing optical principles such as reflection and refraction.

Safety and Maintainability

Lighting design requires consideration of safety and maintenance. Lighting and wiring need to comply with safety standards to avoid fire and other safety hazards.

Meanwhile, the arrangement and selection of lighting should also facilitate the later maintenance and replacement.

Energy efficient and Eco-friendly

The lighting of public high space, in addition to using natural light such as setting up skylights and light wells to supplement, with the development of science and technology, energy consumption can be further reduced by upgrading the lighting equipment, such as the use of energy-efficient light sources such as LEDs and intelligent control systems to realize on-demand lighting and dimming, thus reducing energy consumption.

Light and Consumption

Commercial environment design based on consumer psychology, consumption habits have shifted from focusing on practical effects to human-centered, lighting should be adapted to the heart of the consumer through the visual reflection of feelings. To allow the light environment design into the overall environmental atmosphere, to better create a business environment.

Psychophysics

Analytics

Chromatics

Using psychophysical theories and methods, WAC has conducted in-depth research on human perception of and reaction to color. Through a large amount of experimental data, a close connection between color and human psychology has been drawn.

WAC has conducted an in-depth study on human color preference and recognition using big data and statistical analysis methods. Through statistical analysis of a large number of samples, WAC has identified general patterns and differences in human color preferences. For example, WAC found that there are significant differences in color preferences among different age groups, genders and cultural backgrounds.

WAC is dedicated to the scientific definition, measurement and representation of color, and its research encompasses color space, color models, color matching and color correction. Through indepth research, more accurate and reliable color representation methods have been developed, providing strong support for the application of color in various fields. In the field of lighting, WAC's research results have been widely used in the design and optimization of lighting in museums, art galleries, commercial lighting and other places, improving color reproduction and visual comfort.

WAC has also developed a series of innovative products and services by integrating and applying research results in psychophysics, statistics and chromaticity. Using the principles of color psychology, for example, WAC provides personalized lighting color matching solutions for areas such as commercial and public spaces, enhancing the visual effect and comfort of the space.

Light and Consumption

Back in 2019, WAC has stepped into research in various disciplines such as psychophysics, statistics and chromatics, and through in-depth exploration, it has successfully achieved multi-dimensional research results on human color preference, recognition and comfort.

Patent for Invention - Study of Light Colors for Bronze Illumination

Patent No: 201911006731.6、202010314056.X

In the field of professional lighting for museums, WAC has indicatively put forward the “Multi-dimensional Lighting Color Matching Strategy” by virtue of the cutting-edge topic of “In-depth Research on Lighting Color for Bronze”, aiming to create the best lighting color matching solution for each characteristic exhibit from the multiple dimensions of recognition, audience preference and creation of historical atmosphere. The aim of the strategy is to create personalized optimal lighting color schemes for exhibits with different characteristics, in terms of recognition, audience preference and historical atmosphere creation. Based on this solid foundation, WAC continues to broaden the boundaries of research and application, and successfully extends this outstanding achievement to the field of commercial lighting, realizing customized lighting color design for different commercial space characteristics and illuminated objects, and tailoring the light and shadow art for each unique scene.

Commercial Retail and Lighting

In commercial activities, lighting occupies a pivotal position. Artful use of lighting can highlight the unique temperament and taste of the store, so that customers in the moment they step into the store door will have the feeling: "This is exactly what I'm looking for that store!" Lighting performs a vital role in guiding customers through the store. For all kinds of products, through the carefully designed focus lighting, can accurately capture the customer's eyes, stimulate their desire to buy, and then promote the selection and sale of goods.

Lighting shall be comprehensive and adaptable

Lighting, as part of the store's equipment, should be aligned with the head office's marketing strategy. With seasonal changes and variations in sales trends and marketing strategies, lighting should be easily adjusted accordingly.

Atmosphere Creation Visual Orientation

Lighting should highlight the quality of the goods and correctly represent the shape, color, luster and quality of the goods. Lighting produces a favorable atmosphere that positively influences shoppers and stimulates their desire to shop. Good lighting may also provide guidance to customers.

Capture Attention

Lighting shall enable the store to stand out from the visual environment of a busy neighborhood or shopping center full of stores. For this reason, the lighting of the display windows and interior decoration shall present the unique features of the store in comparison with the surrounding stores.

Engaging Part

Lighting for store windows shall be carefully designed to draw attention of the customers.
